COMPANY DESCRIPTION:

The Classic Watson is the board that will take the average rider, and help turn them into a great rider. This board says Classic on the side of it for a reason; it's an aggressive and snappy performance board that maintains a smooth feel. No matter what your riding level is, you'll be able to appreciate this modern day high performance machine. The carbon X pattern has been elongated to increase torsional rigidity through the control zone of the board. The 3-stage hard hitting pop that boosts you straight up. Truly compliments the wake to wake rider. The Spiral V with double concave mid-section breaks the water for soft landings. Initiates and rolls into turns quicker and easier. The molded in fins are more defined, shorter base molded in side fins provide positive control without catching too soon. Load these up and push as hard as you want. Fast, loose, and have the holding power to carve like mad. The quad vented channels are placed between the molded fins to vent water through the tip. The water skips over these channels to give lift without disrupting water flow around the fins. Helps generate speed while keeping you pointed in the right direction.
